Back-End Developer with the ability to create automations, e-commerce platforms, and efficient websites using Python, Django, and relational SQL databases. Currently in the process of learning new languages and technologies.

EXPERIENCE

LundQLA Web

BackEnd Developer

June 2024 – November 2024

- I built the payment system, including webhooks, subscription management, product purchasing functionality, and customer database management, using Django and JavaScript.

PROJECTS

Crypto Prices App

- A desktop application that displays cryptocurrency prices in real time using the Binance API.

Web User Profile

- A web application that provides user registration, profile management, post creation and viewing, as well as an activity feed.

Amazon Scraper

- Web scraping to search for any product on Amazon, shows different prices and allows you to choose one to save in a database.
